EDUCATION

The Ohio State University, College of Art and Science

Columbus, OH

Bachelor of Science in Computer Information Science

Graduation: Dec 2025

- Specialization: Artificial Intelligence (AIT)
 - Core courses: Data Mining, Artificial Intelligence, Computer Networking, Computer Vision
- GPA: 3.5

WORK EXPERIENCE

Fuyao Glass America

Dayton, Ohio

Operations Analytics - onsite

Feb 2026 – Present

- Built Python/SQL ETL to unify tempering machine, sensor, and inspection data into analysis-ready tables.
- Developed reproducible Jupyter analysis pipelines with validation checks for traceable, auditable decisions.
- Delivered Excel KPI dashboards (PowerQuery/Pivots) for supervisors to track throughput and labor efficiency.
- Improved reliability with cron + alerting—99.3% job success and 2.4 hrs/week less downtime.
- Applied Lean Six Sigma (DMAIC) to validate root causes with data and standardize fixes via SOPs.

Resilience Inc.

Tampa, Florida

Software Engineer Intern – remote

June 2025 – Present

- Integrated lightweight AI-powered recommendation module, enhancing personalization and user engagement.
- Built React Native components and unified navigation, 45% fewer duplicate styles, 30% fewer UI regressions.
- Centralized state and reusable layouts, reducing render bugs by 40% and shortening feature.
- Optimized app performance by reducing image load time and improving UI rendering efficiency.
- Collaborated with backend developers to connect APIs and ensure seamless data flow across screens.

Chinese Academy of Sciences, Institute of Automation

Beijing, China

AI Research Intern – onsite

June 2024 – August 2024

- Developed and optimized AI visual perception modules, improving accuracy and response time.
- Proposed and implemented fault prediction algorithms, achieving over 90% diagnostic accuracy.
- Built and optimized CNN and LSTM models, outperforming traditional methods.
- Applied Transformer model for time-series prediction, achieving above 90% accuracy on multiple datasets.
- Assisted in data preprocessing and analysis for AI research projects, supporting team findings.

ACADEMIC PROJECTS

PetCare — Cross-Platform Pet Management App

Columbus, Ohio

React Native · TypeScript · Supabase · Zustand

November 2025 – April 2026

- Designed end-to-end product development from UX wireframing to full-featured React Native implementation
- Built a cross-platform pet app with multi-pet profiles, activity logs, and AI health Q&A.
- Implemented secure Supabase CRUD with RLS, ensuring strict user-level data protection.
- Designed reusable UI components and a scalable icon-mapping system for consistent UX.
- Improved UI responsiveness by optimizing state updates with Zustand.

Benchmarking Classical and Deep Learning-Based Image Steganography Algorithms

Columbus, Ohio

Computer Vision Research Project

October 2025 – December 2025

- Built a reproducible image watermarking benchmark with unified data, attacks, and metrics.
- Reimplemented HiDDeN in PyTorch and a minimal StegaStamp interface.
- Added modular differentiable distortions for JPEG, blur, crop, affine, plus error correction.
- Produced robustness and imperceptibility results with BER, PSNR, SSIM, LPIPS and clear ablations.

HONORS & SKILLS

- Data Analysis: Proficient in using SQLite, MongoDB, and Jupyter for data analysis.
- Programming Languages: Skilled in Python, Java, C, ERB, HTML/CSS, Ruby, and JavaScript in projects.
- Artificial Intelligence: Designed and deployed models like CNN, LSTM, and Transformers.
- Computer Vision: Optimized vision algorithms with OpenCV, pytorch for object detection.
- Robotics: Integrated perception modules into robots, improving autonomy and performance.
- Leadership and Teamwork: Led cross-functional teams and excelled in collaboration.
